TIME WOLF JUNO
VERSION 4.0

BIOMETRIC FINGER PRINT TECHNOLOGY AT YOUR SERVICE

Overview

The Juno uses field proven biometric fingerprint technology in combination with our highly rated InfiniTime 7.0 Labor Management System. The Juno brings you the power of an automated time & attendance terminal with integrated biometric technology, at a great price. The Juno is compact in design and easy to use. It allows the user to clock in & out with the touch of the finger. The user also has the option of viewing their last recorded time, transferring departments, or even entering other information like tips, miles, etc.

The large LCD provides maximum readability, and the on-board speaker provides audible and verbal confirmation of a complete or incomplete transaction. The Juno also comes with an internal bell scheduler allowing you to use the internal speaker to signal common start, end and break times. The Juno is also capable of utilizing any of an employees fingerprints. The Juno is capable of holding 1,500 templates and 30,000 transactions, making the Juno perfect for almost any size company.

The Juno comes standard with two easy ways to connect to the InfiniTime Labor Management System. The Juno comes with a 50 in. RS-232 cable for direct communication to a PC. The Juno also comes standard with a TCP/IP Ethernet port for communication across a network. The Juno comes with both options at no additional cost.

How It Works

The Juno uses the latest in advanced biometric fingerprint technology. Features like the rugged ZK optical sensor make operation and fingerprint recognition easier and more efficient.

Users simply place one of their fingers on the green lit optical sensor. The fingerprint is then scanned and compared to all fingerprints on file using a highly accurate method of measurement. In under two seconds the identity is confirmed, the punch created and vocal confirmation made.

The data collected by the Juno terminal is then sent to the InfiniTime Labor Management System. With InfiniTime, detailed reports can be generated,exceptions tracked, and data passed on to payroll for check processing.

Features & Extras

- Can read any fingerprint! (Not limited to the index finger)
- One year parts and labor warranty
- Optional backup battery available
- Large backlit display for easy operation
- Alarm indicator for full memory or other errors
- Optional internal bell scheduler
- Interactive menu for completion of complex tasks
- Real time labor data collection for constant updates
- Store 30,000 user transaction on-board
- Connect to Time Wolf via RS-232 or TCP/IP (Network)
- Audible speech confirmation via internal speaker

BIOMETRIC SOLUTIONS THAT HELP SAVE YOU MONEY

Applications

The Juno holds 1,500 employees and 30,000 punch transactions, making the Juno fit for any size organization, allowing you to download time & attendance data at your leisure. Pinless fingerprint identification technology makes the punching process quick and easy, capable of handling large groups of employees fast and accurately.

With two different connection methods and the two ways it collects data, the Juno fits in to the infrastructure of most organizations. The Juno is one of only a few business purchases that pays for itself and helps you save loads of time in the process!

Save Money

- Replace badges with fingerprint identification
- Save time with pinless entry
- Reduce overtime by locking out early punches
- Sealed keypad reduces maintenance costs
- Reduce labor management time with realtime data

Expandability

- Choose to use direct connect or TCP/IP Ethernet
- Enroll users in the clock easily & remove old users quickly
- Easily upgrade your system at anytime to InfiniTime
- Add and remove employees from the Juno easily
- Optional backup battery ensures operation

Connection Methods

- Direct connection to the computer via RS-232
- Internal 10mb/100mb TCP/IP connection ready

Technical Specifications

Size: 8.46" (width) x 6.88" (height) x 2.4" (depth)
Weight: 2 lbs
Display: Character LCD, 128 x 64
Power: 2A / 5 VDC
Operational Temperature: (0°C to 45°C)
Fingerprint Verification Time: <=2 s
Transaction Buffer: 30,000 Transactions
Fingerprint Template Capacity: 1,500
External Ports: RS-232, TCP/IP
Operating System: Linux
LED Indicator: 2 Array LED Indicators (Red, Green)

Increase Productivity

- User identification at the terminal in <= 2 seconds
- Department transfers done in one transaction
- Employee can view last recorded time
- Quickly enter miles, tips, commission etc.
- Touch and go system insures better accuracy
- Rugged ZK optical sensor for durability
- Linux based operating system for reliability
- Quick audible verification of transaction
